Re Millenium Rail Facility Site Groundwater Results
Millennium Rail Inc EPA ID # **PAID990752821**
Route 22 Hollidaysburg, PA 16648

Dear Mr Turner

EPA has reviewed the groundwater results from the February 1, 2007 sampling event at your facility performed by Boelter Associates. The data was submitted to EPA to support the assumptions that the Hollidaysburg facility did not have groundwater contamination in the area located between the former lagoons and Brush Run. The results from this sampling event indicate that no groundwater concentrations exceeded MCLs (Maximum Contaminant Levels) or Pennsylvania Act 2 clean-up levels. The data from this sampling event and the data from the 2001 PADEP investigation of the three private wells in close proximity to the site, are also strong indicators that the former lagoons are having little or no impact on the groundwater in the immediate area of the former lagoons.

— With the completion of the lagoon sampling the substantive requirements of the RCRA Corrective Action program have now been met at the Millenium Rail property, and EPA believes that no further action is necessary at this time. EPA plans to issue a no further action finding for this site. —

If you have any questions about this determination please feel free to contact Grant Dufficy at 215-814 3455 or at dufficy.grant@epa.gov

Sincerely

Abraham Ferdas
